Smoother Wireless Experience

Wi-Fi 6 (802.11ax) is designed to give you a smoother and more enjoyable wireless experience in your hyper-connected home. Wi-Fi 6 improves network average throughput by up to 3 times¹ and up to 75% reduction² in latency as compared to Wi-Fi 5 (802.11ac). Wi-Fi 6 (802.11ax) supports all current Wi-Fi devices and is backwards compatible with Wi-Fi 5 and earlier generation Wi-Fi devices.

¹ 802.11ax 2x2 160MHz enables 2,402Mbps maximum theoretical data rate, ~3X faster than standard 802.11ac 2x2 80MHz (867Mbps) and nearly 6x faster than baseline 1x1ac (433Mbps) Wi-Fi as documented in IEEE 802.11 wireless standard specifications, and require the use of similarly configured 802.11ax wireless network routers.

² "Up to 75% lower latency" is based on Intel simulation data of 802.11ax with and without OFDMA using 9 clients. Average latency without OFDM is 36ms, with OFDMA average latency is reduced to 7.6ms. Latency improvement requires that the AP and all clients support OFDMA.
